
INSTRUCTION MANUAL

The Christie Vivid Red ceiling mount is designed to provide fast, simple and secure ceiling installation of your Christie projector. Special roll, pitch and horizontal adjustments simplify projection positioning for image alignment. The ceiling mount also has positive registration lock, allowing projector removal without losing projector mount registration. This mount can be attached using a standard NPT 1 1/2" pipe column or an adjustable column.

BEFORE YOU BEGIN

- **CAUTION:** To prevent damage to the mount, which could affect or void the Factory warranty, thoroughly study all instructions and illustrations before you begin to install the mount.
- If you have any questions about this installation, see the back page of this manual for contact information.

IMPORTANT WARNINGS AND CAUTIONS!

- WARNING:** A **WARNING** alerts you to the possibility of serious injury or death if you do not follow the instructions.
- CAUTION:** A **CAUTION** alerts you to the possibility of damage or destruction of equipment if you do not follow the corresponding instructions.
- **WARNING: Improper installation can result in serious personal injury! Make sure that the ceiling structural members can support a redundant weight factor five times the total weight of the equipment. If the ceiling can not support this weight, reinforce the ceiling before installing the mount.**
 - **WARNING: Be aware also of the potential for personal injury or damage to the unit if it is not adequately mounted.**
 - **WARNING: The installer is responsible for verifying that the ceiling to which the mount is anchored will safely support the combined load of all attached components or other equipment.**
 - **WARNING: The weight of the projector must not exceed 40 lbs (18 kg), the maximum load capacity of the mount.**
 - **CAUTION:** To avoid personal injury or damage to the mount, be sure that it is installed square and parallel in all dimensions.
 - **CAUTION:** Check the unit for shipping damage before you begin the installation.

TOOLS REQUIRED FOR INSTALLATION

- Phillips screwdrivers, No. 1 and No. 2 TIP
- NOTE:** Other tools may be required depending on the method of installation.

PROJECTOR INSTALLATION PROCEDURES

Install the mount on the projector as follows:

1. Turn the projector upside down.
2. Place the bracket on the bottom of the projector, aligning all five holes in the bracket with the threaded inserts in the bottom of the projector.

CAUTION: Be careful not to overtighten screws when attaching mount. Overtightening may damage threads or distort mount.

3. Install three M6 X 12mm screws and flat washers, one in front and two at the rear into the threaded inserts of the projector (see Figure 1).

RPA INSTALLATION PROCEDURES

There are two methods for installing the RPA. The RPA can be column mounted or surface mounted.

WARNING: Improper installation can cause serious personal injury! Make sure that the ceiling structural members can support a redundant weight factor *five times* the total weight of the equipment you intend to support overhead. The ceiling must be reinforced before you install the mount if the ceiling cannot support a redundant weight factor *five times* the total weight of the equipment.

Column Mount RPA

Install the RPA on a column as follows:

1. Thread the locking ring, tangs facing down, and RPA onto the threaded end of the column tube (see Figure 2 and Figure 3).
2. Using five studs on mount and five thumb screws, secure the RPA to the mount (see Figure 4).
3. Thread the locking ring against the RPA to lock the RPA in position and, if desired, route the cables through the RPA and pipe as shown in Figure 5.

Surface Mount RPA

Install the RPA as follows:

1. Disassemble the RPA:
 - a. Remove four #10-24 X 3/8" long pan head roll adjustment screws (see Figure 6).
 - b. Remove two #10-24 X 3/8" long pivot screws.
 - c. Remove the Ceiling bracket from the joint bracket (see Figure 7).
2. Secure the ceiling bracket to the wood framing member.
3. Secure the ceiling bracket to the joint bracket (see Figure 7) using four #10-24 X 3/8" long pan head roll adjustment screws and two #10-24 X 3/8" long pivot screws (see Figure 6).
4. Using four studs on mount and four thumb screws, secure the RPA to the mount (see Figure 6).
5. If desired, route cables through RPA as shown in Figure 8.

Figure 8. Adjust Yaw, Pitch, and Roll

ADJUST YAW, PITCH, AND ROLL

Adjust Yaw

Adjust Yaw as follows:

1. Loosen the 1 1/2" jam nut and back it off a couple of turns.

WARNING: When turning the mount in a counterclockwise direction, it may be completely unthreaded. The assembly could fall from the pipe.

2. Turn the assembly clockwise (raise) or counterclockwise (lower) to the desired yaw position.
3. Turn the jam nut down (counterclockwise) until it securely seats against the top cross member.

Adjust Pitch (Vertical Elevation)

Adjust pitch using the three #10-24X3/8" pitch adjustment screws located on each side of the adjustment plate. Adjust pitch as follows:

1. Loosen (slightly) three #10-24X3/8" pitch adjustment screws located on each side of the adjustment plate (see Figure 9).
2. Adjust projector angle to desired pitch.
3. Tighten three #10-24X3/8" pitch adjustment screws located on each side of the adjustment plate.

Adjust Roll

Adjust roll using the six #10-24X3/8" roll adjustment screws, three on the front and three on the back, of the adjustment plate. Adjust roll as follows:

1. Loosen (slightly) six #10-24X3/8" roll adjustment screws (see Figure 10).
2. Adjust projector to desired roll position.
3. Tighten six #10-24X3/8" roll adjustment screws.
