

Construction:

The Coverguard frame is aluminum construction powder coated flat black and the window is clear acrylic. *Polycarbonate or glass windows are optional.* The cover secures to the display perimeter with adjustable brackets that allow a centered installation to many 50" plasma displays. See display width and height range.

This cover is intended to provide directional protection of a display without interfering with free air circulation around the display. An air space of 1 inch or more should be maintained between the rear edge of the cover and the wall.

The cover can be installed to a vertical or tilted display, however access to the rear of the display is necessary for installation.
